

Autonomous Cleaning

Robots have been around in the industry for many years, but until now have been, in our opinion, not a cost-prohibitive solution. That's changing. With the advancement of technology along with years of investment to improve quality and efficiency we feel the time is now right for a robotic or co-botic solution to support cleaning contracts.

Tennant

Brayborne's supplier Tennant have created a T7 autonomous robot. It has proved very successful in the United States with Walmart being a major investor. We are working with Tennants to understand the potential benefits it could bring to our customers within all our sectors. This robot is based on the excellent and proven Tennent T7 manual scrubber Dryer.

Nilfisk

Launched in the UK in September 2020, this is looking like a very good machine. Smaller than the Tennant T7, we believe that it could offer excellent benefits for the future. With the option to Lease or Buy, there is also flexibility. We are commencing trialling to monitor performance and value.

ICE

ICE have launched a suite of autonomous cleaning machines called Co-Botics. At first glance these look to have real potential and appear to have great flexibility in both small and large areas. We will be looking closely at these machines over the coming months and will be looking to trial to measure performance and value verses its competitors.

SOLUTIONS

Having access to Autonomous cleaning gives flexibility and options to our customers, which we believe will support improvements, consistency and value for the future.

We are also reviewing other autonomous cleaning solutions that can complete carpet cleaning/vacuuming.
